ITEM 170

**Application of Classes
(Exceptions to NMFC 100 Series Items 170 and 421)**

To insure the correct assessment of freight charges, shipper must use proper commodity descriptions on the bills of lading and shipping orders. Such descriptions must conform to those shown in the National Motor Freight Classification (STB NMF 100 Series). Appropriate abbreviated descriptions are permitted provided the NMFC item and appropriate Sub number thereof are shown. Incomplete or improper commodity descriptions accompanied by a class rating are not acceptable forms of abbreviation and shall not determine the proper classification rating applicable to such commodity. Packaging types are required for classification rating and must also be shown.

If Carrier receives a bill of lading, shipping order, manifest or receipt for goods where an incomplete or improper commodity description is used or where the NMFC item number is not valid or has expired, Carrier will make every effort to classify the freight according to the information shown. In the event Carrier, in its judgment, cannot determine the proper classification rating, such commodity will be assigned a class 150 rating, and rates will be assessed on that basis.

(See Notes 1 & 3) When one or more of the articles are not accurately identified on the bill of lading and the actual density of the articles can be determined by the carrier, the shipment will be rated at the applicable class shown in Table 1, based on the actual density of the shipment.

For commodities that are subject to class ratings that are dependent on the actual density or density group, shipper must show on bills of lading and shipping orders at time of shipment the actual density or density group. If the actual density or density group is not shown and shipment is inadvertently accepted, charges will initially be assessed on the basis of the density subject to class 150. If there is no density subject to class 150, the next highest class applicable, regardless of density, will apply. Upon submission of satisfactory proof of the actual density, freight charges will be adjusted to the basis of the class applicable to such density. (See Notes 2 & 3) When the actual density of the articles can be determined by the Carrier, the shipment will be rated at the applicable class shown in Table 1, based on the actual density of the shipment.

For commodities in the NMFC that are designated with the classification of "0" or listed as "not taken" or "not accepted", these will be assigned a class 150 rating, and rates will be assessed on that basis. When one or more of these items shown on the bill of lading can have the actual class shown in Table 1, based on the actual density of the shipment.

Note 1: Upon submission of satisfactory "proof" of the actual commodity shipped and where a proper description of articles can be determined, charges will be adjusted on the basis of the proper description, NMFC item and class.

Note 2: Upon submission of satisfactory "proof" of actual density, charges will be adjusted to the basis of the class applicable to such density.

Note 3: "Proof" is described as an invoice or packing slip along with a pre-printed specification sheet or catalog page, which lists the commodity description, weight and shipping dimensions. If an invoice and packing slip are not available, then a copy of the specification sheet or catalog page information identifying the freight must correspond to an order/product number, which can also be found on the original Bill of Lading.

ITEM 290

Cubic Capacity – Minimum Density

Except as otherwise provided, shipments meeting the conditions of this item shall be subject to a minimum charge, based upon a calculated weight and the applicable rate. The calculated weight shall be determined by multiplying the cubic capacity of the shipment by six (6) pounds for each cubic foot or portion thereof. The applicable rate shall be determined from otherwise applicable provisions including but not limited to tariffs, rate scales, rating, discounts, percentage expressions and commodity rates. However, shipments subject to NMFC class (not exception) ratings or multiple rates (of any type) shall be rated at the applicable class 85 rates in lieu of the actual NMFC classification or multiple rates.

i. Method of determining cubic capacity and density charge:

- A. A density minimum charge will apply on a shipment only if it occupies more than 750 cubic feet of a trailer as tendered for shipment and if its density as tendered is less than 6 pounds per cubic foot. Such shipments will be subject to a minimum charge using a proforma weight calculated at 6 pounds per cubic foot. The shipment will be rated at the applicable class 85 using all of the applicable tariffs. Customer's applicable discount will apply. When no discount is available a 35% discount will be applied
- B. A vertical dimension of 85 inches or actual height, whichever is greater, will be used to calculate cube for units that cannot be top loaded with like freight due to any of the following:
 - a. The nature of the article
 - b. Packaging or lack of packaging used
 - c. Pallets are in a "pyramided", "rounded off", or "topped off" fashion, and/or
 - d. Specific instruction by the shipper on the bill-of-lading, on the actual articles as tendered, or by the Consignee to the effect that no other freight is to be on top of the article
- C. A horizontal dimension of eight feet will be used to calculate cube for the units that cannot load side by side in the trailer and will not allow for loading of other normal skids beside them.
- D. Same day multiple shipment pick-ups from the same shipper, having the same consignee, will be considered as one shipment for provisions of Item 290 to apply.

The provisions of this item are not applicable in connection with shipments subject to "Capacity Load" – Item 390, 101-Series or "Control and Exclusive Use of Vehicle" – Item 470, 101-Series provisions
